

Introducing CELLDOCK

The First Effective and Inexpensive Docking Station that lets you Send and Receive Cell Phone Calls on a Standard Telephone

Coral Springs, FL, March 16, 2005 --- The brand-new CELLDOCK integrates cell phones and land lines in one handy unit. CELLDOCK is a modern, compact docking station that offers remarkable features which include:

- The ability to send and receive cell phone calls on a standard telephone
- Connect cell phones to the same line as existing land line
- Operate with or without land line service
- CELLDOCK can actually replace land line service
- With one CELLDOCK, users can connect up to 5 regular telephones

The price is just \$99.99 with a 30-day guarantee.

With the CELLDOCK users can:

- Answer incoming calls
- Connect voice to cellular and land lines
- Send and receive cell phone calls on a land line telephone
- Activate call waiting between cellular and land line
- Use caller ID feature
- Provide 'ring' voltage for PBX or stand-alone system

CELLDOCK has a built in charger and comes with all adapters needed for compatible major brand cell phones like Nokia, Motorola, Siemens, Sony Ericsson and many others.

No more searching for your ringing cell phone around the home or office!

CellDock is a division of CellAntenna, a Florida-based company that provides technological products that solve cellular communications problems throughout the world. CellAntenna offers total engineered solutions for customers with cellular signal issues including the SOHO CAE50 repeater that boosts and increases the signal, home and small office repeater kits and building repeaters. CellAntenna also provides its CJAM signal jammers to government agencies. They have worked with many notable organizations such as the U.S. Armed Forces, NASA, Lockheed Martin, Sun Microsystems, GE, and many others.

Information on all of CellAntenna's products is available on www.cellantenna.com
